

COMMON DIAGNOSIS CODES and CONDITIONS

Recording Diagnosis Codes and Conditions

Claims submitted to DPW contain a generic code of V41.9 *Unspecified Problem with Special Functions*. All service providers completing logs or other service documents are required to list the appropriate ICD-9 CM code or diagnosis/condition in narrative form. Students with special needs often have multiple conditions and exceptionalities. Service providers should denote the diagnosis/condition which is most closely related to the reason their services are required.

The list of diagnoses/conditions in this Appendix is not all-inclusive. It contains diagnoses/conditions historically used by SBAP service providers and common diagnoses and conditions identified as having a relationship to special education. The list is separated by IDEA exceptionality classifications. A code/diagnosis/condition is only included once in the list, even though it could be applied to more than one exceptionality. Service providers should consult the entire list when obtaining a specific code/narrative description for record keeping requirements. Questions concerning the use of diagnoses or conditions should be directed to the LEA's Leader SBAP Account Manager.

Note: Some diagnosis codes contain the abbreviation NOS. The abbreviation reflects not otherwise specified.
